New Zealand

Connecting data, science and people

Kia ora!

We are an established New Zealand SME with Horizon experience and would love to support your next bid. Our team collaborates with research groups globally, building dashboards and data science solutions.

Our goal is to make data and research more accessible by linking complex analytics with practical decisions.

Using open-source technologies, we visualise data, craft dashboards, and build research software and decision-support tools to connect research with stakeholders. A key expertise of ours is R Shiny, but we utilise a range of open-source software and can help our collaborators build data science capability where there is interest.

We are proficient at adapting our proven processes to specific research contexts and have worked with organisations such as WHO, FAO, UNEP, EFSA, universities and research groups, as well as local and national government.
